

# Hygienic plan for cleaning during the stay to ensure safety

All apartments are thoroughly disinfected before each guest arrival

The principle of better cleaning is to go beyond basic cleaning and disinfect the entire accommodation. This is a thorough cleaning procedure in 4 steps, which is carried out in each room of the apartment.

## 1. Face masks and nitrile disposable gloves

- Safety comes first, so we use personal protective equipment during cleaning.

## 2. Approved disinfectants

- We use disinfectants approved by local regulatory agencies against dirt, bacteria and viruses.

## 3. Surfaces that people usually touch

- Always clean all surfaces, especially those that people often touch, and use a suitable disinfectant.

## 4. Professional ozone generator

- Ozone has high microbicidal activity, so when it is used correctly, it is able to eliminate most viruses, bacteria, parasites and mold, including COVID-19. It is very ecological and harmless to health at low concentrations.

## Products that we use for disinfection after cleaning.

### Desident TM CaviCide 3in1

- Medium-intensity broad-spectrum cleaner: effective against TB, blood pathogens, viruses, bacteria and mold. Cleans, disinfects and decontaminates.
- Maximum three minutes until destruction of all microorganisms.

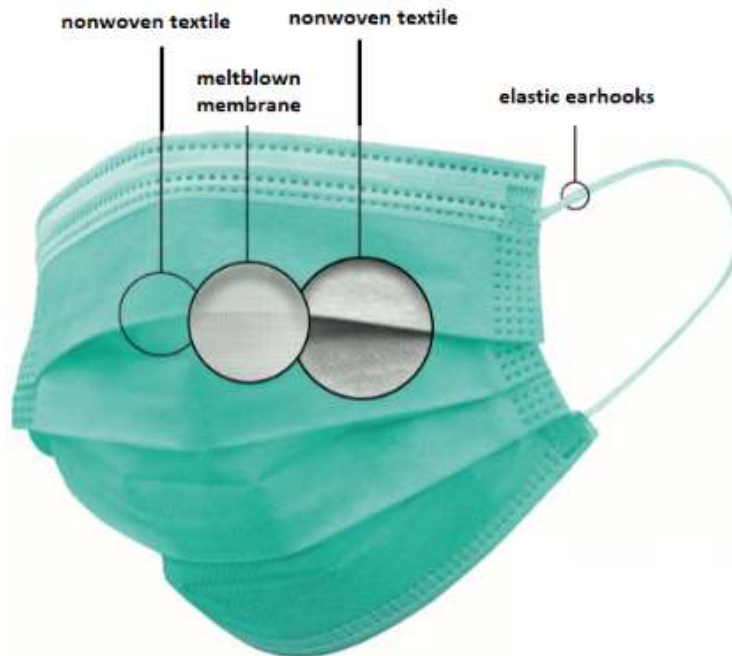

### Cleaning before disinfection

### Cleaning after disinfection

## Face masks

## Hand disinfectant gel **Bech4care** (for everyone in the apartment)

- Alcohol-based antiseptic gel for hygienic and surgical hand disinfection. It is bactericidal, tuberculocidal and virucidal and at the same time acts against yeasts.
- Apply the required amount of product (approx. 3 ml) to your hands and leave it on for 30 seconds

## Anti-COVID

- Disinfectant for personal hygiene - hand disinfection

## Special Care-Ozone-20-Professional ozone generator with an output of 20,000 mg / h.

- Disinfection of a new generation, the product is intended for establishments and households for disinfection of rooms with ozone. Ozone disinfection takes place after cleaning of the apartment. When you return home, please ventilate.
- There must be no people or animals in the room during operation. After application, the room needs to be ventilated.

### **Bed linen and towels laundry**

- We handle laundry with the utmost care to eliminate dust swirling and potential contamination.
- We wash used bed linen and towels at a temperature of at least 70 ° C for at least 125 minutes to kill potential bacteria.
